

# Applications

- **Replaces highly structured forms:** It is sometimes difficult to re-create forms electronically due to the complexity of the printed form structure. Now these forms can retain their original structure while still collecting the data electronically. The end result is a more convenient experience and the elimination of paper from the process.
- **Supports Regulatory Compliance:** In the case of highly regulated forms, the form must be approved by a government agency. Therefore, in order to make the form electronic, it must be re-created identically to the paper form—down to the pixel. Image Forms allow organizations to leverage the benefits of electronic forms without changing the image of the paper form. Forms are also secured and contain an audit trail to further support compliance initiatives.

# Key Features

- Retains the exact look of regulated forms by mapping data fields to an image of the form.
- Leverages the OnBase Forms platform to provide highly configurable forms that ease the user experience.
- Fully integrates with OnBase Workflow to improve data capture and support complex processes.
- Utilizes popular features like AutoFill Keyword Sets, Keyword Data Sets, and OnBase Workflow to populate fields with existing data, minimizing re-keying of values.
- Provides form-side logic and calculations with Custom Actions and Calculated Fields.
- Supports form signing using touch screen devices and signature pads.

# Interface

***An easily configurable Image Form built in the OnBase Forms Designer***
